PROFILE

Engineering student and Data Engineering trainee who turns messy raw data into clean, structured datasets with Python and SQL, documenting every step so results can be reproduced. Also experienced in C++ and Flutter through team projects, including SpotMe, which won Best Team.

EDUCATION

Bachelor of Engineering — Systems & Computers, Faculty of Engineering, Al-Azhar University, Egypt — Expected graduation: 2028

EXPERIENCE

Data Engineering Trainee — Digital Egypt Pioneers Initiative (DEPI) — Ongoing

- Practicing collecting, cleaning, and structuring datasets through training exercises.
- Documenting every step so results are reproducible and easy to review.

Member — SBS (Step By Step) Student Activity — Student activity

- Attended technical sessions and completed a Flutter project as a Flutter Delegate (certificate awarded August 2026).
- Worked on collaborative team projects across Flutter and software development.

PROJECTS

SpotMe — Sports Talent Discovery App (Team Project) — Flutter, Dart

- Mobile platform connecting young athletes with scouts and academies, built by a large team from several committees, including accounting and marketing.
- Built the splash and onboarding screens and contributed to the scout and player screens.
- Won **Best Team** and a **15,000 EGP cash prize** at the SpotMe Conference.

Hospital Management System (Team Project) — C++, OOP, Linked Lists, ERD

- Console-based system connecting managers, doctors, and patients for appointments, medical records, and billing.
- Developed the **patient module** (patient registration and patient data handling).
- The project applies OOP (inheritance, encapsulation, polymorphism) and linked-list data structures with dynamic memory.
- Graded **Excellent** and awarded a certificate.

Mini OS Simulator (Personal Project) — Python, JSON

- Built a virtual file system with directories and files, supporting commands such as ls, mkdir, cd, read, write, rm, and tree.
- Saves data to a JSON file after every command, so it persists between sessions.

LED Logic Tester (Academic Project) — TTL ICs, Tinkercad, SimulIDE

- Designed and simulated an LED logic tester using TTL ICs, and tested AND and OR gate circuits through breadboard simulation.

SKILLS

Data: Python, SQL, Data Cleaning, ETL Fundamentals, Databases
Programming: C++, OOP, Data Structures, Dart
Mobile: Flutter, UI flows
Tools: Git/GitHub, Visual Studio, Tinkercad, SimulIDE, Proteus, Microsoft Office
Soft skills: Problem solving, planning before coding, presentation skills

CERTIFICATIONS & ACHIEVEMENTS

- **C++ Programming Language** — IT Sharks
- **Flutter Delegate** (Certificate of Achievement) — SBS (Step By Step), August 2026
- **Best Team + 15,000 EGP cash prize** — SpotMe Conference
- **Excellent grade + certificate** — Hospital Management System (team project)
